

1. What will be the result of the following line of code? `df.dtypes` (1 Point)

```
symboling          int64
normalized-losses  object
make              object
fuel-type          object
aspiration         object
num-of-doors       object
body-style         object
drive-wheels       object
engine-location    object
wheel-base        float64
length            float64
width             float64
height            float64
curb-weight        int64
engine-type        object
num-of-cylinders   object
engine-size        int64
fuel-system        object
bore              object
stroke            object
compression-ratio  float64
horsepower         object
peak-rpm          object
city-mpg           int64
highway-mpg        int64
price             object
dtype: object
```

2. To enable a summary of all the columns, what must the parameter `include` be set to for the method `describe`? (1 Point)

☒ 1 `df.describe(include="all")`
