1. How would you multiply each element in the column df["a"] by 2 and assign it back to the column df["a"]? (1 Point)

```
1  df["a"]=2*df["a"]
```

2. How would rename the column "city_mpg" to "city-L/100km"? (1 Point)

```
1  df.rename(columns={"city_mpg": "city-L/100km"}, inplace=True)
```
